Dear Melanie and Mauricio

FRNSW Alexandria UST Sampling

1 Background

A 225,000 Litre Underground Storage Tank (UST) is located adjacent to entrance on the southern side of the Fire and Rescue New South Wales (FRNSW) Alexandria Site. This UST was historically used for the capture and storage of water used for fire-fighting training. The use of the UST for this purpose ceased in the early 2000's however stormwater collected from the training area drainage system still flows into the UST. The dimensions of the tank are approximately 11 m x 8 m x 4.5 m. The tank is designed so that the water will fill to a maximum level of approximately 2.875 m from the bottom of the tank and then will overflow into the stormwater discharge drain, which runs from the site to Sheas Creek.

FRNSW was concerned the UST held water and sediments containing high concentrations and Per- and poly- fluoroalkyl substances (PFAS) which may have been acting as a potential secondary source of PFAS contamination. FRNSW engaged GHD Pty Ltd (GHD) to collect samples of the water to identify the concentration of PFAS and other contaminants in this water to help inform disposal options (if required).

2 Objective

GHD's objectives were as follows:

- To collect representative samples of water from the UST and to assess the concentration of PFAS within this water.
- To assess the volume of water current remaining within the UST.
- To assess the condition of the UST including the number and condition of inlets/outlets (this scope item was put on hold pending sampling results).

3 Scope

To complete the objectives listed above, GHD undertook the following scope of work:

- Update of Job Safety and Environmental Assessment (JSEA).
- Gauging of the UST using an interface probe to assess the depth and volume of water.

- Collection of two primary samples and one duplicate sample of water within the tank (one sample collected from the centre of the tank, approximately 2.5 m below ground level (bgl)) and one collected from as close as practicable to the base of the tank, 4.3 m bgl). This allowed water that had settled and stratified over time to be sampled. Samples were collected as "grab" samples collected from the specified depth using a peristaltic pump at low flow rate with no purging being undertaken. A duplicate sample was also collected for QAQC purposes. Samples were collected using a low flow peristaltic pump with the inlet depth determined by attaching the HDPE tubing to the interface probe using HDPE zip ties.
- Samples were analysed for the following analytical suite (as requested by FRNSW):
 - PFAS suite (standard LOR)
 - Major anions
 - Minor anions
 - Total Alkalinity
 - PH
 - Electrical Conductivity
 - Total Organic Carbon
 - Total Recoverable Hydrocarbons (TRH)
 - Oils and grease
 - Volatile Organic Compounds
 - Total Suspended Solids
 - Specific Gravity
 - Free Chlorine
 - Heavy Metals

4 Field Observations

Access to the UST was via a grated manhole cover. Upon arrival at the site, it was noted that leaves and debris had accumulated over the grated cover. These were cleared and the cover opened so that the water in the UST could be observed. The water was still and had leaves and debris on the surface. During sampling from the centre of the UST, the water collected was noted to be generally clear and had a stagnant/decay odour. During sampling from close to the base of the UST, the water was also noted to be clear but contained black sediment particles which were observed flowing into the sampling bottles. The deeper sample also had a strong stagnant/decay odour. The outflows of the UST could not be observed via the manhole however it is understood that when the UST spills over, the water flows into Sheas Creek (underground stormwater culvert) via a 450 mm pipe (observed during previous confined space works at the site).

5 Results

GHD submitted the two primary samples and one duplicate samples to a NATA accredited laboratory for analysis. The results of this analysis are provided in **Tables 1 and 2**.

Table 1 provides a summary of the PFAS results compared against the NEMP 2018 Heath Based Guidance Values for Drinking Water and Recreational Use of water as well as Aquatic Ecosystems Freshwater Guideline Values (95% species protection). It is acknowledged that the water within the UST is unlikely to be consumed or used recreationally however during wet weather events, it is diluted and has the potential to be released to the environment. These guideline values are applied for comparison purposes against the samples previously collected at the outflows of the site and to provide wider context around the levels of PFAS reported in the samples. GHD notes that the assessment of potential risks associated with the water within the UST was beyond the scope of this targeted sampling from the UST.

It is noted that measured concentrations of PFAS and heavy metals were detected above the laboratory LOR. There were no detections of TRH or VOC's with the exception of Toluene in samples collected from close to the base of the UST.

The measured concentration of PFOS exceeded the NEMP 2018 Aquatic Ecosystems Freshwater (95% Species protection) criterion in the three samples analysed (two primary and one duplicate).

The summed concentrations of PFOS and PFHxS exceeded the NEMP 2018 Health Based Guideline Value for Drinking Water in the three samples analysed (two primary and one duplicate)

Table 2 provides the results of all other analytes. Screening criteria have not been applied as this data was gathered to inform management options for the tank contents.

6 Quality Assurance/ Quality Control

6.1 Field QAQC

Given the scope of this sampling event was to collect two grab samples from a single UST, there was no opportunity for cross contamination to occur between the samples. However, several quality control measures were utilised to ensure the representativeness and integrity of samples and accuracy and reliability of analytical results. These measures included:

- Dedicated disposable tubing was used to collect the samples, and the samples were collected in laboratory supplied containers.
- Sampling was undertaken by an experienced GHD Senior Environmental Scientist.
- Sample identification procedures - samples were immediately transferred to sample containers of appropriate composition and preservation for the required laboratory analysis. All sample containers were clearly labelled with a sample number, job number, and sample date. The sample containers were then transferred to a chilled insulated container for sample preservation prior to and during shipment to the analytical laboratory.
- Chain of custody information requirements - a chain of custody form was completed and forwarded to the testing laboratory with the samples.

- Blind duplicate: Blind replicates are used to identify the variation in the analyte concentration between samples from the same sampling point and the repeatability of the laboratory's analysis. The results of the blind duplicate (QA01) are provided in Table 3 with calculated relative percentage differences (RPD) between the blind duplicate and the primary sample.

6.2 Laboratory QAQC

Laboratory methods used by the primary laboratory were suitable for environmental contaminant analysis and are based on established internationally recognised procedures such as those published by the United States Environmental Protection Agency (US EPA), American Public Health Association (APHA), AS and National Environment Protection (Assessment of Site Contamination) Measure (NEPM).

The individual testing laboratory conducted an assessment of the laboratory QC program however the results were also independently reviewed and assessed internally by GHD. Recovery targets are defined in the Eurofins QA/QC section of the certificates of analysis reports. All laboratory QA/QC results are documented with the laboratory certificates of analysis appended to this letter.

6.3 Duplicate Results

Duplicate RPD's are presented in **Table 3**. It is noted that variation in heavy metal concentrations have caused elevated RPD's that exceed the nominated acceptance criteria. When the concentration of an analyte in one sample is low and the concentration in the other sample is non detect, this can give rise to large RPD value but does not cast doubt on the overall integrity of the data. The elevated RPD's for heavy metals in these samples are not considered to affect the integrity of the data.

7 Conclusions

Based on the field observations and analytical data, and subject to the limitations presented in Section 7 of this letter, the following conclusions are made:

- The total depth of the tank was measured to be 4.375 m bgl, with a standing water level of 1.50 m bgl. This equates to a water depth of 2.875 m in the UST.
- The water collected was clear but contained sediment particles (noted in deeper sample UST_4.3) and had a stagnant odour.
- The analytical results confirm the presence of PFAS within the water in the UST. The summed concentration of PFHxS and PFOS exceeded the NEMP (2018) Human Health drinking water criteria and the concentration of PFOS exceeded the NEMP (2018) Aquatic Ecosystems Freshwater guidelines (95% species protection). The drinking water screening criteria is conservative in this case, as the likelihood of consumption of this water is very low as it is discharging into a subsurface concrete lined culvert and ultimately into Alexandria Canal (not publically accessible and containing tidal brackish water). The ecological guidelines are also considered conservative as the receiving water bodies are highly disturbed ecosystems however detailed evaluation of potential risk to receptors was beyond the scope of this limited sampling program.

- There were detections of other analytes in the samples collected, specifically heavy metals and toluene however these results were provided to inform management options for disposal and therefore were not screened against environmental or human health based criteria.

8 Limitations

This report has been prepared by GHD for FRNSW and may only be used and relied on by FRNSW for the purpose agreed between GHD and FRNSW as set out in this report. The conclusions and recommendations in this report are based on conditions encountered, and information reviewed, at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the site may be different from the site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular site conditions, such as site accessibility, location of buildings, services and operational constraints. As a result, not all relevant site features and conditions may have been identified in this report.

Sincerely
GHD

John Ewing

*RPDs have only been considered where a concentration is greater than 1 times the EQL.

**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-30 x EQL); 50 (> 30 x EQL))

***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Subject: 643028 Change to Analysis

EXTERNAL EMAIL*

Hi,

I need to request a change to the analysis for job 643028.

UST_4.3 – Please cancel TOPA analysis and instead schedule for Qtot analysis.

Thanks,

John

Sample Receipt Advice

Company name: **GHD Pty Ltd NSW**
 Contact name: John Ewing
 Project name: FRNSW ALEXANDRIA
 Project ID: 2127887
 COC number: Not provided
 Turn around time: 3 Day
 Date/Time received: Feb 28, 2019 4:00 PM
 Eurofins | mgt reference: **643028**

Sample information

- A detailed list of analytes logged into our LIMS, is included in the attached summary table.
- Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 16.4 degrees Celsius.
- All samples have been received as described on the above COC.
- COC has been completed correctly.
- Attempt to chill was evident.
- Appropriately preserved sample containers have been used.
- All samples were received in good condition.
- Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
- Appropriate sample containers have been used.
- Sample containers for volatile analysis received with zero headspace.
- Split sample sent to requested external lab.
- Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to John Ewing - John.Ewing@ghd.com.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions - Method: LTM-ORG-2010 TRH C6-C40	Melbourne	Mar 04, 2019	7 Day
Total Recoverable Hydrocarbons - 2013 NEPM Fractions - Method: LTM-ORG-2010 TRH C6-C40	Melbourne	Mar 01, 2019	7 Day
Total Recoverable Hydrocarbons - 2013 NEPM Fractions - Method: LTM-ORG-2010 TRH C6-C40	Melbourne	Mar 04, 2019	7 Day
Volatile Organics - Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices	Melbourne	Mar 01, 2019	7 Days
Chlorine (Free Residual) - Method: LTM-INO-4330 Total Residual and Free Residual Chlorine	Melbourne	Mar 07, 2019	1 Day
Conductivity (at 25°C) - Method: LTM-INO-4030 Conductivity	Melbourne	Mar 01, 2019	28 Day
Nitrate (as N) - Method: APHA 4500-NO3 Nitrate Nitrogen by FIA	Melbourne	Mar 01, 2019	28 Day
Oil & Grease (HEM) - Method: APHA 5520B Oil & Grease	Melbourne	Mar 01, 2019	28 Day
pH (at 25°C) - Method: LTM-GEN-7090 pH in water by ISE	Melbourne	Mar 01, 2019	0 Hours
Total Organic Carbon - Method: APHA 5310B Total Organic Carbon	Melbourne	Mar 05, 2019	28 Day
Total Suspended Solids Dried at 103–105°C - Method: LTM-INO-4070 Analysis of Suspended Solids in Water by Gravimetry	Melbourne	Mar 04, 2019	7 Days
Turbidity - Method: Turbidity by classical using APHA 2130B (LTM-INO-4140)	Melbourne	Mar 06, 2019	2 Day
Specific Gravity* - Method: Specific Gravity:- MGT Method 1950 - Density weight per unit volume.	Melbourne	Mar 04, 2019	5 Day
Metals M8 - Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS	Melbourne	Mar 01, 2019	28 Days
Eurofins mgt Suite B11C: Na/K/Ca/Mg - Method: LTM-MET-3010 Alkali Metals by ICP-AES	Melbourne	Mar 01, 2019	180 Day
Per- and Polyfluoroalkyl Substances (PFASs) n:2 Fluorotelomer sulfonic acids (n:2 FTSAs) - Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)	Brisbane	Mar 01, 2019	14 Day
Perfluoroalkyl carboxylic acids (PFCAs) - Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)	Brisbane	Mar 01, 2019	14 Day
Perfluoroalkyl sulfonamido substances - Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)	Brisbane	Mar 01, 2019	14 Day
Perfluoroalkyl sulfonic acids (PFSAs) - Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)	Brisbane	Mar 01, 2019	14 Day
Eurofins mgt Suite B11E: Cl/SO ₄ /Alkalinity Chloride - Method: LTM-INO-4090 Chloride by Discrete Analyser	Melbourne	Mar 01, 2019	28 Day
Sulphate (as SO ₄) - Method: LTM-INO-4110 Sulfate by Discrete Analyser	Melbourne	Mar 01, 2019	28 Day
Alkalinity (speciated) - Method: APHA 2320 Alkalinity by Titration	Melbourne	Mar 01, 2019	14 Day

Sample Detail

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure, April 2011 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.2 2018
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.2 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and its Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference
